## Metallfarbe Epoxyd-Acryl-Speziallacke für innen und außen

Epoxyd-Acryl-Speziallacke zeichnen sich durch ihre Licht- und Wetterfestigkeit aus;

Sie sind schnell trocknend, haben eine sehr gute Haftung, sind abriebfest und dauerhaft.

Epoxyd-Acryl-Speziallacke sind ideal für alle Kunstschmiedearbeiten, weil sie ohne Zwischenanstrich sofort auf frisch verzinkte Oberflächen aufgebracht werden können und zum Streichen, Spritzen und Tauchen geeignet sind.

Zum Streichen fast unverdünnt, zum Tauchen und Spritzen mit 15 - 20 % Nitroverdünnung zu verarbeiten. Die zu lackierenden Teile müssen frei von Rost, Öl und Fett sein.

## Metallfarbe Vernici speciali epossidiche-acriliche per uso interno ed esterno

La qualità superiore delle vernici epossidiche-acriliche si manifesta nella loro resistenza agli agenti atmosferici ed alla luce. Sono diluibili con diluente sintetico oppure nitro, con brevi tempi di essiccazione, ottima adesione e resistenza all'abrasione, di lunga durata.

Le vernici epossidiche-acriliche speciali sono ideali per l'artigianato del ferro battuto, si possono applicare senza strato intermedio su superfici appena zincate. Il prodotto va diluito con diluente sintetico oppure con nitro e può essere applicato a pennello, spruzzo ed immersione.

Per l'applicazione a pennello il prodotto va applicato quasi puro, mentre per l'applicazione a spruzzo o ad immersione si diluisce con 15 - 20 % con diluente sintetico oppure nitro

Gli oggetti da verniciare devono essere privi di ruggine, olio e grassi.

## Metallfarbe Epoxydic-acrylic special paints for interior and exterior use

Epoxydic-acrylic special paints are fast to light and extremely weatherresistant;

They are fast drying and show extreme adhesion and abrasion resistance which make them much more durable.

Epoxydic-acrylic special paints are ideal for the iron-forging handcraft, because they can be applied immediately even on freshly galvanized surfaces without intermediate coat.

They are suitable for brushing, spraying as for dipping.

They are to be diluted with synthetic diluent or nitro. For brushcoating use it almost pure, for dip coating and spraying add 15 - 20 % synthetic diluent or nitro. The objects must be free of rust, oil or grease.
